Subject: Special Use Permit Case Number SB15-001
Applicant: Scannell Properties
Agenda Item Number: 8B
Project Summary: Allow the grading of approximately 81 acres and excavation of a total of approximately 355,417 cubic yards of earth in preparation of construction of two industrial buildings and associated driveways and parking areas.
Recommendation: Approval with Conditions
Prepared by: Roger D. Pelham, MPA, Senior Planner
Planning and Development Division
Washoe County Community Services Department
Phone: 775.328.3622
E-Mail: rpelham@washoecounty.us

Description
Special Use Permit Case Number SB15-001 (Mustang Industrial Grading) – To allow the grading of approximately 81 acres and excavation of a total of approximately 355,417 cubic yards of earth in preparation of construction of two industrial buildings and associated driveways and parking areas.

- Applicant: Scannell Properties
  Attn: Dan Salzer
  800 East 96th Street, Suite 175
  Indianapolis, IN 46240
- Property Owner: Hiatt Land and Development Company
  Attn: Bart Hiatt
  515 Windmill Drive
  Fallon, NV 89406
- Location: South of Mustang Road, between the railroad tracks and the Truckee River.
- Assessor’s Parcel Number: 084-370-02
- Parcel Size: ±117.76 acres
- Master Plan Category: Industrial (I)
- Regulatory Zone: Industrial (I)
- Area Plan: Truckee Canyon
- Citizen Advisory Board: East Truckee Canyon
- Development Code: Authorized in Article 438, Grading
- Commission District: 4 – Commissioner Hartung
- Section/Township/Range: Section 15 and 16, T19N, R21E, MDM, Washoe County, NV

Special Use Permit

The purpose of a Special Use Permit is to allow a method of review to identify any potential harmful impacts on adjacent properties or surrounding areas for uses that may be appropriate within a regulatory zone; and to provide for a procedure whereby such uses might be permitted by further restricting or conditioning them so as to mitigate or eliminate possible adverse impacts. If the Board of Adjustment grants an approval of the Special Use Permit, that approval is subject to Conditions of Approval. Conditions of Approval are requirements that need to be completed during different stages of the proposed project. Those stages are typically:

- Prior to permit issuance (i.e., a grading permit, a building permit, etc.).
- Prior to obtaining a final inspection and/or a certificate of occupancy on a structure.
- Prior to the issuance of a business license or other permits/licenses.
- Some Conditions of Approval are referred to as “Operational Conditions.” These conditions must be continually complied with for the life of the business or project.

The Conditions of Approval for Special Use Permit Case Number SB15-001 are attached to this staff report and will be included with the Action Order.
Project Evaluation

The applicant has requested to conduct Major Grading. Major Grading is defined as any grading which surpasses certain thresholds established in Article 438, Grading, of the Development Code. The applicable thresholds in this case include grading of more than four acres and excavation of more than 5000 cubic yards of earth (Development Code Section 110.438.35). The grading is proposed to take place adjacent to the Truckee River. The current request is for grading only and does not authorize any subsequent development. Due to the proximity to the river particular care must be taken to ensure that negative impacts are avoided.

The applicant submitted an initial grading plan with the special use permit application that did not reflect compliance with several requirements of the Grading code (Article 438 of the Development Code). For example, there were proposed to be cut and fill slopes up to 30 feet in height. Many of the slopes proposed to be graded were very long and straight. The revised plans show retaining walls that substantially reduce the cut and fill slopes. The retaining walls and the remaining slopes that are likely to be visible from off of the subject site (from the Truckee River) are designed to undulate such that a more natural appearance is created. Grading was shown up to the property line in several locations on the original plans, the revised plans show compliance with the required grading setback of ten feet, in all but one instance and conditions of approval have been included to address that situation.

The project site shows evidence of significant disturbance in the past as well as recent dumping of rock, gravel, soil, concrete and asphalt. Conditions of approval have been included to require removal of all materials not suitable for grading. Landscaping is proposed to be located between the developed portion of the site and the river. That area also shows significant disturbance and contains large amounts of litter and other debris. Conditions of approval have been included to require removal of litter and debris from that area. Conditions of approval have also been included to require temporary fencing to be established to inhibit construction or grading directly adjacent to the river.

Clean up of significant amounts of litter should have a positive impact on the area. As can be seen on the following overhead photo, the nearest dwelling is approximately ¼ mile to the southwest, in Storey County. The area to the north has railroad tracks and other industrial development. Grading for development of and industrial use in this area is compatible with the nature of the surrounding area.

Article 222, Truckee Canyon Area, of the Development Code requires certain protections for the Truckee River, no buildings are allowed within 300 feet of the centerline, grading requires a special use permit, a water quality report is required prior to issuance of building permits. The plans submitted and the conditions provided ensure compliance with all applicable requirements. While it is not required for approval of this Special Use Permit for grading, the applicant will be required to submit a traffic study for the subsequent industrial development prior to approval of construction permits. If the development will generate 80 peak hour vehicle trips, then a Development Agreement will be required.

It is the opinion of staff that, as conditioned, no significant detriment to the surrounding area or the Truckee River will occur as a result of the requested grading. The area closest to the river will be used for landscaping and a walking path only.
East Truckee Canyon Citizen Advisory Board (ETCCAB)

The proposed project is scheduled to be presented to the East Truckee Canyon Citizen Advisory Board on April 1, 2015. That is one day prior to the BOA hearing on this item. Staff will attend that meeting and will present any comments made to the BOA at the hearing.

Reviewing Agencies

The following agencies received a copy of the project application for review and evaluation.

- US Army Corps of Engineers
- US Bureau of Land Management
- Nevada Department of Environmental Protection
- Nevada Division of Transportation
- Nevada Division of Water Resources
- Nevada Division of Wildlife
- Washoe County Community Services Department
  - Planning and Development
  - Parks and Open Space
o Engineering
 o Roads
 o Sewer
 o Traffic

• Washoe County Health District
 o Vector-Borne Diseases
 o Air Quality Management
 o Environmental Health Services
 o Emergency Medical Services

• Truckee Meadows Fire Protection District

• Regional Transportation Commission

• Washoe-Storey Conservation District

• NV Energy

• Truckee Meadows Water Authority

Eight out of the 21 above listed agencies/departments provided comments and/or recommended conditions of approval in response to their evaluation of the project application. A **summary** of each agency’s comments and/or recommended conditions of approval and their contact information is provided. The Conditions of Approval document is attached to this staff report and will be included with the Action Order

• **Washoe County Planning and Development** addressed grading standards and retaining wall materials and colors.
  Contact: Roger Pelham, 775.328.3622, rpelham@washoecounty.us

• **Washoe County Engineering** addressed traffic, access, runoff, and technical requirements for submission of a grading permit.
  Contact: Leo Vesely, 775.325.8032, lvesely@washoecounty.us

• **Truckee Meadows Fire Protection District** addressed requirements for compliance with Chapter 60 of the Washoe County Code.
  Contact: Amy Ray, 775.326.6005, aray@tmfpd.us

• **Nevada Department of Transportation** addressed traffic and drainage requirements.
  Contact: Anita Lyday, 775.834.8320, alyday@dot.state.nv.us

• **Washoe County Health District** addressed standards for drainage basins and rockery walls to inhibit vector habitat.
  Contact: Jim Shaffer, 775.785.4599, jshaffer@washoecounty.us

• **United States Army Corps of Engineers** addressed the requirements to determine if there are wetlands on the subject site.
  Contact: Kristine Hansen, 775.784.5304, kristine.s.hansen@usace.army.mil

• **Washoe-Storey Conservation District** addressed landscaping, erosion control and revegetation standards.
  Contact: Kevin Roukey, 775.232.1571, kevinjr@att.net
Staff Comment on Required Findings

Section 110.810.30 of Article 810, Special Use Permits, within the Washoe County Development Code, requires that all of the following findings be made to the satisfaction of the Washoe County Board of Adjustment before granting approval of the request. Staff has completed an analysis of the special use permit application and has determined that the proposal is in compliance with the required findings as follows.

1. **Consistency.** That the proposed use is consistent with the action programs, policies, standards and maps of the Master Plan and the Truckee Canyon Area Plan.

   *Staff Comment:* All specific provisions of Article 222 have been addressed by the plans or recommended conditions of approval.

2. **Improvements.** That adequate utilities, roadway improvements, sanitation, water supply, drainage, and other necessary facilities have been provided, the proposed improvements are properly related to existing and proposed roadways, and an adequate public facilities determination has been made in accordance with Division Seven.

   *Staff Comment:* The project has been reviewed by Washoe County Engineering and the Nevada Department of Transportation, appropriate conditions of approval have been included.

3. **Site Suitability.** That the site is physically suitable for grading to accommodate an industrial development, and for the intensity of such a development.

   *Staff Comment:* The site is zoned for industrial use and is adjacent to other industrial uses.

4. **Issuance Not Detrimental.** That issuance of the permit will not be significantly detrimental to the public health, safety or welfare; injurious to the property or improvements of adjacent properties; or detrimental to the character of the surrounding area.

   *Staff Comment:* Conditions of approval have been recommended to mitigate potential impacts upon the Truckee River and the surrounding area that may be created by the proposed grading.

5. **Effect on a Military Installation.** Issuance of the permit will not have a detrimental effect on the location, purpose or mission of the military installation.

   *Staff Comment:* There is no military installation in the surrounding area.

**Recommendation**

Those agencies which reviewed the application recommended conditions in support of approval of the project. Therefore, after a thorough analysis and review, Special Use Permit Case Number SB15-001 is being recommended for approval with conditions. Staff offers the following motion for the Board’s consideration.

**Motion**

I move that, after giving reasoned consideration to the information contained in the staff report and information received during the public hearing, the Washoe County Board of Adjustment approve with conditions Special Use Permit Case Number SB15-001 for Scannell Properties, having made all five findings in accordance with Washoe County Development Code Section 110.810.30:

1. **Consistency.** That the proposed use is consistent with the action programs, policies, standards and maps of the Master Plan and the Truckee Canyon Area Plan;
2. **Improvements.** That adequate utilities, roadway improvements, sanitation, water supply, drainage, and other necessary facilities have been provided, the proposed improvements are properly related to existing and proposed roadways, and an adequate public facilities determination has been made in accordance with Division Seven;

3. **Site Suitability.** That the site is physically suitable for grading to accommodate an industrial development, and for the intensity of such a development;

4. **Issuance Not Detrimental.** That issuance of the permit will not be significantly detrimental to the public health, safety or welfare; injurious to the property or improvements of adjacent properties; or detrimental to the character of the surrounding area;

5. **Effect on a Military Installation.** Issuance of the permit will not have a detrimental effect on the location, purpose or mission of the military installation.

**Appeal Process**

Board of Adjustment action will be effective 10 days after the public hearing date, unless the action is appealed to the County Commission, in which case the outcome of the appeal shall be determined by the Washoe County Commission.

xc: **Applicant:** Scannell Properties  
Attn: Dan Salzer

The project approved under Special Use Permit Case Number SB15-001 shall be carried out in accordance with the Conditions of Approval granted by the Board of Adjustment on April 2, 2015. Conditions of Approval are requirements placed on a permit or development by each reviewing agency. These Conditions of Approval may require submittal of documents, applications, fees, inspections, amendments to plans, and more. These conditions do not relieve the applicant of the obligation to obtain any other approvals and licenses from relevant authorities required under any other act or to abide by all other generally applicable Codes.

Unless otherwise specified, all conditions related to the approval of this Special Use Permit shall be met or financial assurance must be provided to satisfy the Conditions of Approval prior to issuance of a grading or building permit. The agency responsible for determining compliance with a specific condition shall determine whether the condition must be fully completed or whether the applicant shall be offered the option of providing financial assurance. All agreements, easements, or other documentation required by these conditions shall have a copy filed with the County Engineer and the Planning and Development Division.

Compliance with the Conditions of Approval related to this Special Use Permit is the responsibility of the applicant, his/her successor in interest, and all owners, assignees, and occupants of the property and their successors in interest. Failure to comply with any of the conditions imposed in the approval of the Special Use Permit may result in the initiation of revocation procedures.

Operational Conditions are subject to review by the Planning & Development Division prior to the renewal of a business license each year. Failure to adhere to the Operational Conditions may result in the Planning and Development Division recommending that the business license not be renewed until conditions are complied with to the satisfaction of Washoe County.

Washoe County reserves the right to review and revise the Conditions of Approval related to this Special Use Permit should it be determined that a subsequent license or permit issued by Washoe County violates the intent of this approval.

For the purpose of conditions imposed by Washoe County, “may” is permissive and “shall” or “must” is mandatory.

Conditions of Approval are usually complied with at different stages of the proposed project. Those stages are typically:

- Prior to permit issuance (i.e., grading permits, building permits, etc.).
- Prior to obtaining a final inspection and/or a certificate of occupancy.
- Prior to the issuance of a business license or other permits/licenses.
- Some “Conditions of Approval” are referred to as “Operational Conditions.” These conditions must be continually complied with for the life of the project or business.
The Washoe County Commission oversees many of the reviewing agencies/departments with the exception of the following agencies.

- The DISTRICT BOARD OF HEALTH, through the Washoe County Health District, has jurisdiction over all public health matters in the Health District. Any conditions set by the Washoe County Health District must be appealed to the District Board of Health.

FOLLOWING ARE CONDITIONS OF APPROVAL REQUIRED BY THE REVIEWING AGENCIES. EACH CONDITION MUST BE MET TO THE SATISFACTION OF THE ISSUING AGENCY.

**Washoe County Planning and Development Division**

1. The following conditions are requirements of the Planning and Development Division, which shall be responsible for determining compliance with these conditions.

   Contact Name – Roger Pelham, 775.328.3622, rpelham@washoecounty.us

   a. The applicant shall demonstrate substantial conformance to the plans approved as part of this special use permit. The Planning and Development Division shall determine compliance with this condition.

   b. The applicant shall submit complete construction plans and building permits shall be issued not later than April 2, 2017. Failure to obtain all necessary permits by April 2, 2017 shall result in this approval being null and void. The applicant shall complete construction within the time specified by the building permits. Compliance with this condition shall be determined by the Planning and Development Division.

   c. The applicant shall attach a copy of the action order approving this project to all administrative permit applications (including building permits) applied for as part of this special use permit.

   d. Temporary construction fencing shall be installed at the limits of grading as shown on the approved plans, prior to commencement of grading activity to prevent disturbance in areas shown on the plans to remain undisturbed.

   e. All materials (such as gravel, concrete, soil and other dumped items) not suitable for use as cut-and-fill material shall be removed from the project site to a location approved by Washoe County.

   f. The applicant shall clean up and remove all trash and debris from the area proposed for landscaping and walking path between the proposed driveway and the river.

   g. All disturbed areas shall be stabilized such that there shall be no run-off into the Truckee River, and such that dust is controlled on site.

   h. Prior to issuance of a grading permit the applicant shall submit a water quality report meeting all requirements of Development Code section 110.222(d), for approval by Washoe County.
i. A note shall be placed on all construction drawings and grading plans stating:

**NOTE**

*Should any prehistoric or historic remains/artifacts be discovered during site development, work shall temporarily be halted at the specific site and the State Historic Preservation Office of the Department of Museums, Library and Arts shall be notified to record and photograph the site. The period of temporary delay shall be limited to a maximum of two (2) working days from the date of notification.*

j. Boulders unearthed during grading shall be placed on all cut and fill slopes to help stabilize the slopes and to help create a more natural appearance.

k. The color of all retaining walls on the subject site shall match the color of the surrounding undisturbed geology. Retaining walls constructed of imported rock material and retaining walls constructed of concrete shall be stained with a permanent simulated desert varnish / stain product. Retaining walls constructed of boulders native to the subject site do not require stain.

l. The graded slope at section “A-A” on sheet C3.1 of the revised plans, shall not be constructed within ten feet of the property line. The slope at that location may be constructed at a slope of 2H:1V with the approval of the County Engineer in accordance with Section 438.45(a)(4) of the Development Code.

m. Prior to issuance of a grading permit the applicant shall supply an analysis to the Director of Planning and Development sufficient to determine whether the subsequent industrial development will exceed any of the following thresholds:

- Employment by not fewer than 938 employees;
- Housing by not fewer than 625 units;
- Hotel accommodations by not fewer than 625 rooms;
- Sewage by not less than 187,500 gallons per day;
- Water usage by not less than 625 acre feet per year; or
- Traffic by not less than an average of 6,250 trips daily.

If any of these thresholds are exceeded then an application for review of a Project of Regional Significance (PRS) is required.

n. The following **Operational Conditions** shall be required for the life of the project/business/development:

1. This special use permit shall remain in effect until or unless it is revoked or is inactive for one year.

2. Failure to comply with the Conditions of Approval shall render this approval null and void. Compliance with this condition shall be determined by the Planning and Development Division.

3. The applicant and any successors shall direct any potential purchaser/operator of the site and/or the special use permit to meet with the Planning and Development Division to review Conditions of Approval prior to the final sale of the site and/or the special use permit. Any subsequent
purchaser/operator of the site and/or the special use permit shall notify the Planning and Development Division of the name, address, telephone number, and contact person of the new purchaser/operator within 30 days of the final sale.

**Washoe County Engineering and Capital Projects**

2. The following conditions are requirements of the Engineering and Capital Projects Division, which shall be responsible for determining compliance with these conditions.

   **Contact Name** – Leo Vesely, 775.325.8032, lvesely@washoecounty.us

   a. A complete set of construction improvement drawings, including an on-site grading plan, shall be submitted when applying for a building/grading permit. Grading shall comply with best management practices (BMP’s) and shall include detailed plans for grading, site drainage, erosion control (including BMP locations and installation details), slope stabilization, and mosquito abatement. Placement or removal of any excavated materials shall be indicated on the grading plan. All grading shall comply with County Code Article 438, Grading Standards. Silts shall be controlled on-site and not allowed onto adjacent property.

   b. The owner/developer shall obtain from the Nevada Division of Environmental Protection a Stormwater Discharge Permit for construction and submit a copy to the Engineering Division prior to issuance of a grading permit.

   c. The owner/applicant shall complete and submit the Construction Permit Submittal Checklist, the Performance Standards Compliance Checklist prior to obtaining a grading/building permit. The County Engineer shall determine compliance with this condition.

   d. A grading bond of $2,000/acre of disturbed area shall be provided to the Engineering Division prior to any grading.

   e. If the import or export of materials is required, the applicant shall indicate on the plans where the exported material will be taken or where the imported material will be coming from, and a grading permit shall be obtained for the import/export site.

   f. Cross-sections indicating cuts and fills shall be submitted when applying for a grading permit. Estimated total volumes and area of disturbance shall be indicated.

   g. Per the development code, all on site roadway improvements necessary to serve the project shall be designed and constructed to County standards and specifications to the satisfaction of the County Engineer.

   h. A secondary emergency access or approved alternative shall be provided prior to the issuance of a Certificate of Occupancy on the first structure.

   i. A detailed traffic report shall be prepared by a registered engineer and shall address driveway locations and turning movements for truck patterns and movements, and provide recommendations on acceleration/deceleration lanes, storage lanes, and access control. The County Engineer shall be responsible for
determining compliance with this condition and the traffic improvements that are required.

j. Driveway location shall conform to BLM/ Bureau of Reclamation requirements and Washoe County Code Article 436 for commercial driveways.

k. An access easement, from the BLM/ Bureau of Reclamation and approval from Storey County shall be obtained for access through BLM/ Bureau of Reclamation properties and for any necessary improvements to the existing roadway. Copies of approvals, easements and permits shall be provided to the Engineering Division.

l. Applicant/owner shall enter into a maintenance agreement with Storey County for the maintenance of Mustang Road.

m. A hydrology/hydraulic report prepared by a registered engineer shall be submitted to the Engineering Division for review and approval. The report shall include the locations, points of entry and discharge, flow rates and flood limits of all 5- and 100-year storm flows impacting both the site and offsite areas and the methods for handling those flows. The report shall include all storm drain pipe and ditch sizing calculations and a discussion of and mitigation measures for any impacts on existing offsite drainage facilities and properties.

n. The FEMA 100-year floodplain shall appear on the site plan to the satisfaction of the County Engineer. Building permits for structures and fill in these areas shall be in conformance with the Washoe County Code Article 416.

o. No work within the FEMA floodway area will be allowed without specific approval from FEMA.

p. Washoe County will only maintain drainage easements which are at least 15 feet wide and piped to the satisfaction of the County Engineer.

q. The applicant/owner shall provide pretreatment for petrochemicals and silt for all storm drainage from the site to the satisfaction of the County Engineer.

r. All regulatory traffic signs shall meet County standards and the Manual on Uniform Traffic Control Devices.

s. Although the SUP for the grading does not require emergency access to the site, the proposed buildings will require approved emergency access to the site per Washoe County Development Code.

t. Provide approval from BLM on the permitted use of Mustang Road and any improvements that may be required to the road surface for grading operations and the ultimate build out of the site. At a minimum, Washoe County Development Code for industrial developments will be required for the roads and right of ways to the site.

u. Provide recorded documentation of access over BLM parcel 84-172-18 from Mustang Road to the site which meets Washoe County Development Code.

Truckee Meadows Fire Protection District
3. The following conditions are requirements of the Truckee Meadows Fire Protection District, which shall be responsible for determining compliance with these conditions.

**Contact Name** – Amy Ray (775) 326-6005, aray@tmfpd.us

a. The Truckee Meadows Fire Protection District (TMFPD) will require that this project meet the requirements of Washoe County Code 60 to include infrastructure, access, and water for fire suppression.

**Nevada Department of Transportation**

4. The following conditions are requirements of the Nevada Department of Transportation, which shall be responsible for determining compliance with these conditions.

**Contact Name** – Anita Lyday (775)834-8320, alyday@dot.state.nv.us

a. Prior to any grading adjacent to the Nevada Department of Transportation right-of-way, a Drainage Report, including a grading plan, and a Drainage Form must be submitted to the Permit office for review and acceptance. A Drainage Information Form is attached. Please contact the Permit Office at (775) 834-8330 for more information.

b. The Nevada Department of Transportation (NDOT) will require an occupancy permit for any work performed within the State’s right-of-way. Please contact the Permit Office at (775) 834-8330 for more information regarding the occupancy permit.

c. Existing approaches are personal and not transferable with the sale of property. All driveway accesses to the state highway system will be required to comply with the NDOT access management guidelines current at the time of application.

d. The proposed development could have significant impact to FRWA10, 11, 12 and I-80 Mustang Interchange. NDOT currently does not have plans to upgrade this roadway. NDOT suggests consideration of any potential impacts to the roadway and any required mitigation. Any required mitigation will require a permanent encroachment permit and appropriate coordination with NDOT District II Permit staff at (775)834-8330.

e. The applicant may be required to provide a Traffic Study to determine the impacts of this development to the state highway system and any required mitigation strategies. Developer is encouraged to coordinate traffic study review and seek NDOT traffic study approval early in the development planning process.

f. Any truck haul operations to access the state highway system will require a temporary permit and coordination with NDOT District Permit staff at (775)834-8330.

g. Turning exhibits for the design vehicle will be required as part of NDOT permit process. NDOT typically requires the design to accommodate a WB-67 design vehicle.

h. The state defers to the local municipal government agency for land use development decisions. Public involvement for development related
improvements within the NDOT right-of-way should be considered during the municipal land use development public involvement process. Significant public improvements within the NDOT right-of-way, developed after the public involvement process, may require additional public involvement. It is the responsibility of the permit applicant to perform such additional public involvement. We would encourage such public involvement to be part of a municipal land use development process.

**Washoe County Health District**

5. The following conditions are requirements of the Health District, which shall be responsible for determining compliance with these conditions. The District Board of Health has jurisdiction over all public health matters in the Health District. Any conditions set by the Health District must be appealed to the District Board of Health.

**Contact Name –** Jim Shaffer, 775.785.4599, jshaffer@washoecounty.us

a. Any new private catch basins will require a water quality insert placed within all basins to improve water quality downstream and prevent mosquitoes from colonizing this infrastructure (040.013).

b. The detention basins will require our standard design of a cobble rock lined low flow channel, one foot deep and 2-3 feet wide connecting the inlet(s) to the outlet pipe. In addition, we will require over excavating below the low flow channel with a cobble lined infiltration trench design 2 feet wide and 3 feet deep the length of the basins to reduce the downstream effects of storm water runoff (040.023).

c. If vegetation is planted in the detention basins, no planting shall occur within one foot on either side of the low flow channel. The following maintenance language shall be noted on the civil plans," all vegetation, debris and blockages shall require removal in the low flow channel including one foot on either side of the channel on an annual basis. The maintenance will mitigate insect development by preventing standing water from ponding longer than 7 days" (040.022).

d. District Health shall require all voids in the slope stabilization filled to a depth of 3-4 inches with mixed aggregate D size rock 3/4 inch to 1 1/2 inches in range (040.0865).

e. In the design of rockery walls, voids shall be filled by placing smaller rock within the face of the rock wall for the entire height of the wall (040.081).

f. Prior to the sign off of the building plans the above detail designs are required on the plans and a scheduled compliance inspection is required for the above condition(s).

**United States Army Corps of Engineers**

6. The following conditions are requirements of the United States Army Corps of Engineers, which shall be responsible for determining compliance with these conditions.
a. It is recommended that the applicant complete a delineation of waters of the U.S. to include wetlands for the proposed project site. Due to the proximity of the Truckee River there is potential for wetlands to be present.

Washoe-Storey Conservation District

7. The following conditions are requirements of the Washoe-Storey Conservation District, which shall be responsible for determining compliance with these conditions.

Contact Name – Kevin J. Roukey, 775-232-1571, kevinjr.51@att.net

a. The proposed project is located within a designated FEMA Flood Zone and there is no mention of this on the entire application other than an aerial photo showing the area. There is no mention of the applicant’s mitigation measures to stay out of the flood zone or prevent flooding of the facilities. Of primary concern is the potential of the proposed sanitary sewer line which traverses the length of the properties along the river’s high water line back to the septic tanks and leach fields.

b. Item 10 – In response to Item 10 the applicant states that once the grading activities have been completed that all disturbed 3:1 slope be treated with 6-12” rip-rap for erosion protection. We would recommend that the County condition the permit to have these areas be stabilized with bio-engineering methods reviewed by the Natural Resources Conservation Service (NRCS).

c. Item 15 – In response to Item 15 regarding the type of seed mix to be used the applicant responded “…A native grass and shrub mix per site specific seed mix by Comstock Seed Company will be broadcast at approx. rate of 20lbs/ac and lightly chain dragged. A tackifier will be applied at 200 lbs and the area will be hydro-mulched with Ecoaegis Fiber Matrix at the rate of 2000 lbs. /ac. We recommend the permit be conditioned to require that all seed mixes be provided to the Washoe/Storey Conservation District for coordination with the NRCS. We recommend to ensure that native species of trees shrubs and grasses are planted on the project that the County require that applicant, by Special Condition to the permit, submit their proposed planting plan to the Washoe/Storey Conservation District, who in coordination with the USDA Natural Resources Conservation Service, will review and approve the plants and seed mix to be used

d. Item 17 – In response to Item 17 regarding the review of the Revegetation plan by the Washoe /Storey Conservation District, the applicant replied … “No, we are deferring to the expertise of Comstock Seed’s local expertise.”… We recommend the permit be conditioned to require the applicant to coordinate their Revegetation Plan with the Washoe/Storey Conservation District.

e. Conceptual Landscaping Plan – Drawing LC2.1 – Revegetation Notes – the drawings indicate that that …“Revegetated areas shall be acceptable if they exhibit a minimum of 90% coverage by at least three different species within three months of planting”… The Washoe/Storey Conservation District feels that this monitoring period and success criteria are not adequate to develop a
sustainable vegetative cover. We recommend that the County require monitoring for a period of three years with a 90% total cover. If this is not attained then the applicant would be required to reseed and monitor until the success criteria is made. We recommend that the applicant be required to provide a detailed irrigation plan for review. The plan should include the calculations for how much water is proposed for use to maintain the landscaping plan and is there adequate water rights for the amount calculated.

f. The proposed plan drawings do not clearly show where and what type of BMPs will be installed and maintained during the grading operations. We recommend that the County require the applicant to submit a detailed grading plan and SWPP that clearly show the BMPs to be utilized during construction and during operation of the facility to minimize impacts to water quality from storm water runoff.

g. The project is also located adjacent to the Truckee River which is a jurisdictional water of the United States under Section 404 of the Clean Water Act. We recommend the applicant have a jurisdictional wetland delineation and Ordinary High Water Line determination performed and submitted to the Corps of Engineers for approval. This will allow the applicant to be ensured that his proposed project will not involve the deposition of fill or dredged material into jurisdictional waters of the United States. Should jurisdictional waters and wetlands be identified on the property, the applicant may be required to obtain a Department of the Army Permit unless they can avoid impacts to those areas identified.

*** End of Conditions ***

Subject: RE: February Agency Review Memo II (UNCLASSIFIED)

Classification: UNCLASSIFIED
Caveats: NONE

Thank you for the opportunity to review these items:

My comment is for the Mustang Industrial Center Item #2:

It is recommended that the applicant complete a delineation
of waters of the U.S. to include wetlands for the proposed
project site. Due to the proximity of the Truckee River
there is potential for wetlands to be present. For more
information of preparation of a delineation they can contact
me directly at:

INTEROFFICE MEMORANDUM

DATE:   March 05, 2015  
TO:     Roger Pelham, Planning and Development Division  
FROM:  Leo R. Vesely, P.E., Engineering and Capitol Projects Division  
SUBJECT: SB15-001  
        APN 084-370-02  
        MUSTANG INDUSTRIAL GRADING

I have reviewed the referenced special use permit and have the following conditions:

1. A complete set of construction improvement drawings, including an on-site grading plan, shall be submitted when applying for a building/grading permit. Grading shall comply with best management practices (BMP's) and shall include detailed plans for grading, site drainage, erosion control (including BMP locations and installation details), slope stabilization, and mosquito abatement. Placement or removal of any excavated materials shall be indicated on the grading plan. All grading shall comply with County Code Article 438, Grading Standards. Silts shall be controlled on-site and not allowed onto adjacent property.

2. The owner/developer shall obtain from the Nevada Division of Environmental Protection a Stormwater Discharge Permit for construction and submit a copy to the Engineering Division prior to issuance of a grading permit.

3. The owner/applicant shall complete and submit the Construction Permit Submittal Checklist, the Performance Standards Compliance Checklist prior to obtaining a grading/building permit. The County Engineer shall determine compliance with this condition.

4. A grading bond of $2,000/acre of disturbed area shall be provided to the Engineering Division prior to any grading.

5. If the import or export of materials is required, the applicant shall indicate on the plans where the exported material will be taken or where the imported material will be coming from, and a grading permit shall be obtained for the import/export site.

6. Cross-sections indicating cuts and fills shall be submitted when applying for a grading permit. Estimated total volumes and area of disturbance shall be indicated.

7. Per the development code, all on-site roadway improvements necessary to serve the project shall be designed and constructed to County standards and specifications to the satisfaction of the County Engineer.
8. A secondary emergency access or approved alternative shall be provided prior to the issuance of a Certificate of Occupancy on the first structure.

9. A detailed traffic report shall be prepared by a registered engineer and shall address driveway locations and turning movements for truck patterns and movements, and provide recommendations on acceleration/deceleration lanes, storage lanes, and access control. The County Engineer shall be responsible for determining compliance with this condition and the traffic improvements that are required.

10. Driveway location shall conform to BLM/Bureau of Reclamation requirements and Washoe County Code Article 436 for commercial driveways.

11. An access easement, from the BLM/ Bureau of Reclamation and approval from Storey County shall be obtained for access through BLM/ Bureau of Reclamation properties and for any necessary improvements to the existing roadway. Copies of approvals, easements and permits shall be provided to the Engineering Division.

12. Applicant/owner shall enter into a maintenance agreement with Storey County for the maintenance of Mustang Road.

13. A hydrology/hydraulic report prepared by a registered engineer shall be submitted to the Engineering Division for review and approval. The report shall include the locations, points of entry and discharge, flow rates and flood limits of all 5- and 100-year storm flows impacting both the site and offsite areas and the methods for handling those flows. The report shall include all storm drain pipe and ditch sizing calculations and a discussion of and mitigation measures for any impacts on existing offsite drainage facilities and properties.

14. The FEMA 100-year floodplain shall appear on the site plan to the satisfaction of the County Engineer. Building permits for structures and fill in these areas shall be in conformance with the Washoe County Code Article 416.

15. No work within the FEMA floodway area will be allowed without specific approval from FEMA.

16. Washoe County will only maintain drainage easements which are at least 15 feet wide and piped to the satisfaction of the County Engineer.

17. The applicant/owner shall provide pretreatment for petrochemicals and silt for all storm drainage from the site to the satisfaction of the County Engineer.

18. All regulatory traffic signs shall meet County standards and the Manual on Uniform Traffic Control Devices.

Re: Special Use Permit Case Number: SB15-001 (Mustang Industrial Grading)

The Truckee Meadows Fire Protection District (TMFPD) will require that this project meet the requirements of Washoe County Code 60 to include infrastructure, access, and water for fire suppression.

Please contact me with any questions at (775) 326-6005.

Thank you,

Amy Ray
Fire Marshal
March 3, 2015

Washoe County Dept. of Engineering
P.O. Box 11130
Reno, NV 89520-0027

Attention: Roger Pelham, Senior Planner

Dear Mr. Pelham:

I have reviewed the development application permit to allow the grading of approximately 81 acres and excavation of a total of approximately 355,417 cubic yards of earth in preparation of construction of two industrial buildings and driveways and parking areas. I have the following comments:

1. Prior to any grading adjacent to the Nevada Department of Transportation right-of-way, a Drainage Report, including a grading plan, and a Drainage Form must be submitted to the Permit Office for review and acceptance. A Drainage Information Form is attached. Please contact the Permit Office at (775) 834-8330 for more information.

2. The Nevada Department of Transportation will require an occupancy permit for any work performed within the State’s right-of-way. Please contact the Permit Office at (775) 834-8330 for more information regarding the occupancy permit.

3. Existing approaches are personal and not transferable with the sale of property. All driveway accesses to the state highway system will be required to comply with the NDOT access management guidelines current at the time of application.

4. The proposed development could have significant impact to FRWA10, 11, 12 and I-80 Mustang Interchange. NDOT currently does not have plans to upgrade this roadway. NDOT suggests consideration of any potential impacts to the roadway and any required mitigation. Any required mitigation will require a permanent encroachment permit and appropriate coordination with NDOT District II Permit staff at (775) 834-8330.

5. The applicant may be required to provide a Traffic Study to determine the impacts of this development to the state highway system and any required mitigation strategies. Developer is encouraged to coordinate traffic study review and seek NDOT traffic study approval early in the development planning process.

6. Any truck haul operations to access the state highway system will require a temporary permit and coordination with NDOT District Permit staff at (775) 834-8330.

7. Tuning exhibits for the design vehicle will be required as part of NDOT permit process. NDOT typically requires the design to accommodate a WB-67 design vehicle.
8. The state defers to the local municipal government agency for land use development decisions. Public involvement for development related improvements within the NDOT right-of-way should be considered during the municipal land use development public involvement process. Significant public improvements within the NDOT right-of-way, developed after the public involvement process, may require additional public involvement. It is the responsibility of the permit applicant to perform such additional public involvement. We would encourage such public involvement to be part of a municipal land use development process.

Thank you for the opportunity to review this development proposal. The Department reserves the right to incorporate further changes and/or comments as the design review advances. Please feel free to contact me at (775)834-8320, if you have any further questions or comments.

Sincerely,

Anita Lyday, PE, PTOE
Urban Traffic Engineer

To: Fagan, Donna
Cc: Vesely, Leo; Searcy, Adam
Subject: Special Use Permit Case Number SB15-001 (Mustang Industrial Grading)

Donna,

The following conditions shall apply for Roads comments.

1. Although the SUP for the grading does not require emergency access to the site, the proposed buildings will require approved emergency access to the site per Washoe County Development Code.

2. Provide approval from BLM on the permitted use of Mustang Road and any improvements that may be required to the road surface for grading operations and the ultimate build out of the site. At a minimum, Washoe County Development Code for industrial developments will be required for the roads and right of ways to the site.

3. Provide recorded documentation of access over BLM parcel 84-172-18 from Mustang Road to the site which meets Washoe County Development Code.

Please let me know if you have any questions.

Thx,

Kimble
March 9, 2015

Dear Roger,

After having reviewed the special use permit request from Mustang Industrial Grading (SB15-001), please be advised of the following:

1. Any new private catch basins will require a water quality insert placed within all basins to improve water quality downstream and prevent mosquitoes from colonizing this infrastructure (040.013).

2. The detention basins will require our standard design of a cobble rock lined low flow channel, one foot deep and 2-3 feet wide connecting the inlet(s) to the outlet pipe. In addition, we will require over excavating below the low flow channel with a cobble lined infiltration trench design 2 feet wide and 3 feet deep the length of the basins to reduce the downstream effects of storm water runoff (040.023).

3. If vegetation is planted in the detention basins, no planting shall occur within one foot on either side of the low flow channel. The following maintenance language shall be noted on the civil plans, “all vegetation, debris and blockages shall require removal in the low flow channel including one foot on either side of the channel on an annual basis. The maintenance will mitigate insect development by preventing standing water from ponding longer than 7 days” (040.022).

4. District Health shall require all voids in the slope stabilization filled to a depth of 3-4 inches with mixed aggregate D size rock 3/4 inch to 1 1/2 inches in range (040.0865).

5. In the design of rockery walls, voids shall be filled by placing smaller rock within the face of the rock wall for the entire height of the wall (040.081).

6. Prior to the sign off of the building plans the above detail designs are required on the plans and a scheduled compliance inspection is required for the above condition(s).

If there are any questions concerning the aforementioned vector-planning conditions as it relates to environmental health, please call us at 785-4599.

Sincerely,

J. L. Shaffer
Program Coordinator/Planner
Vector-Borne Diseases Program
Environmental Health Division

WASHOE COUNTY IS AN EQUAL OPPORTUNITY EMPLOYER

Page 7 of 10
Subject: February Agency Review – Case Nos. AC15-002; SB15-001; SB14-014; VA15-001 and VA15-002

To whom it may concern,

Thank you for providing us the January Agency Review and the opportunity to review and provide comments. We have reviewed the subject proposed projects and we have the following comments:

**Case No. AC15-002 – Evans Greenhouse**

The proposed project is to construct two greenhouses, Phase 1 of 4,000 sq. ft. and Phase 3 of 30,000 sq. ft. Phases 2 and 4 are not requested at this time.

1. The plans must include details on what type of BMP’s will be utilized and their placement for mitigation of soil erosion.
2. Grading Plan Drawing C-2 – We noted that the applicant has designated the limits of the 100-year flood plain, but does not have the Ordinary High Water Mark of the Truckee River delineated, nor is there any indication of whether or not there are any adjacent wetlands within the flood plain.
3. Grading Plan Drawing C-2 – We also noted that the applicant’s note that they are proposing to clear vegetation between the fence line the riverward property line. We have several concerns with this action:
   a. The removal of vegetation will make this area more susceptible to erosion during periods of high water. We recommend the County condition the permit to maintain native vegetation in this area and plant native willows along the bank of the river to minimize erosion.
   b. As mentioned in comment 2 we are concerned that there could be adjacent wetland in the designated flood plain area and that if any work occurs below the Ordinary High Water Mark, permits under Section 404 of the Clean Water Act would be required from the Corps of Engineers and under Section 401 of the Clean Water Act from the Nevada Department of Environmental Protection. We suggest the County add a condition that requires the applicant to have a wetland delineation conducted to delineate the Ordinary High Water Line and any adjacent wetlands prior to any approvals being given.
4. The applicant must provide evidence that they are applying for any and all necessary permits from all state and Federal agencies, including the tribes, and that they have been issued prior to construction.
Case No. SB15-001 – Mustang Industrial Development - Special Use Permit

The proposed project is to construct a light industrial development including two buildings of 344,000 sq. ft. and 517,000 sq. ft. and associated parking and access roads and other accessory features such as storm water ponds on the 117.76 acre project site acre project site. The project will involve cut of 355,417 cu. yd. and 356,216 cu. yd. fill requiring a total of 799 cu. yd. of additional fill. Approximately 80.82 acres or 68.63% of the project site will be disturbed.

We have the following comments on this proposed project:

1. The proposed project is located within a designated FEMA Flood Zone and there is no mention of this on the entire application other than an aerial photo showing the area. There is no mention of the applicant’s mitigation measures to stay out of the flood zone or prevent flooding of the facilities. Of primary concern is the potential of the proposed sanitary sewer line which traverses the length of the properties along the river’s high water line back to the septic tanks and leach fields.

2. Item 10 – In response to Item 10 the applicant states that once the grading activities have been completed that all disturbed 3:1 slope be treated with 6-12” rip-rap for erosion protection. We would recommend that the County condition the permit to have these areas be stabilized with bio-engineering methods reviewed by the Natural Resources Conservation Service (NRCS).

3. Item 15 – In response to Item 15 regarding the type of seed mix to be used the applicant responded “A native grass and shrub mix per site specific seed mix by Comstock Seed Company will be broadcast at approx. rate of 20lbs/ac and lightly ched dragged. A tackifier will be applied at 200 lbs and the area will be hydro-mulched with Ecoasis Fiber Matrix at the rate of 2000 lbs/ac. We recommend the permit be conditioned to require that all seed mixes be provided to the Washoe/Storey Conservation District for coordination with the NRCS. We recommend to encourage trees species of trees shrubs and grasses are planted on the project that the County require that applicant, by Special Condition to the permit, submit their proposed planting plan to the Washoe/Storey Conservation District, who in coordination with the USDA Natural Resources Conservation Service, will review and approve the plants and seed mix to be used.

4. Item 17 – In response to Item 17 regarding the review of the Revegetation plan by the Washoe/Storey Conservation District, the applicant replied “No, we are deferring to the expertise of Comstock Seed’s local expertise.”... We recommend the permit be conditioned to require the applicant to coordinate their Revegetation Plan with the Washoe/Storey Conservation District.

5. Conceptual Landscaping Plan – Drawing LC2.1 – Revegetation Notes – the drawings indicate that that ... "Revegetated areas shall be acceptable if they exhibit a minimum of 90% coverage by at least three different species within three months of planting"... The Washoe/Storey Conservation District feels that this monitoring period and success criteria are not adequate to develop a sustainable vegetation cover. We recommend that the County require monitoring for a period of three years with a 90% cover. If this is not attained then the applicant would be required to reseed and monitor until the success criteria is made. We recommend that the applicant be required to provide a detailed irrigation plan for review. The plan should include the calculations for how much water is proposed for use to maintain the landscaping plan and is there adequate water rights for the amount calculated.

6. The proposed plan drawings do not clearly show where and what type of BMPs will be installed and maintained during the grading operations. We recommend that the County require the applicant to submit a detailed grading plan and SWPP that clearly show the BMPs to be utilized during construction and during operation of the facility to minimize impacts to water quality from storm water runoff.

7. The project is also located adjacent to the Truckee River which is a jurisdictional water of the United States under Section 404 of the Clean Water Act. We recommend the applicant have a jurisdictional wetland delineation and Ordinary High Water Line determination performed and submitted to the Corps of Engineers for approval. This will allow the applicant to be ensured that his proposed project will not involve the deposition of fill or dredged material into jurisdictional waters of the United States. Should jurisdictional waters and wetlands be identified on the
property, the applicant may be required to obtain a Department of the Army Permit unless they can avoid impacts to those areas identified.

CASE Nos. SB14-014; VA15-001 and VA15-002 – We have no comments on these actions.

These are our comments and recommendations for the subject projects. We appreciate the opportunity to provide comments and recommendations on projects that may have impacts on our natural resources. Should you have any further questions please contact Kevin J. Roukey by phone at 775-232-1571 or email kevinjr_51@att.net.

Sincerely,

Kevin J. Roukey

February 2014
Special Use Permit Application
for Grading
Supplemental Information

(All required information may be separately attached)

Chapter 110 of the Washoe County Code is commonly known as the Development Code. Specific references to special use permits may be found in Article 810, Special Use Permits. Article 438, Grading, and Article 418, Significant Hydrologic Resources, are the ordinances specifically involved in this request.

1. What is the purpose of the grading?

The purpose of the grading is to prepare the site for development of two light industrial buildings, associated parking and access roads, and other accessory features such as storm water ponds.

2. How many cubic yards of material are you proposing to excavate on site?

We are about at a balanced site. We currently have 355,417 CY of cut and 356,216 CY of Fill for a total of 799 CY of total fill required.

3. How many square feet of surface of the property are you disturbing?

Our site is 117.76 acres. We are disturbing 80.82 acres or 68.63% of the site.

4. How many cubic yards of material are you exporting or importing? If none, how are you managing to balance the work on-site?

We are planning on having a balanced site, we currently have 799 CY of fill required but should be able to make that up with the spoils throughout the site.
5. Is it possible to develop your property without surpassing the grading thresholds requiring a Special Use Permit? (Explain fully your answer.)

No. The site has a fair amount of change in elevation and is unable to support the flat building pads required for industrial buildings without the proposed grading.

6. Has any portion of the grading shown on the plan been done previously? (If yes, explain the circumstances and the year the work was done.)

No. None of the proposed grading shown on the grading plan has previously been completed.

7. Have you shown all areas on your site plan that are proposed to be disturbed by grading? (If no, explain fully your answer.)

Yes, the plans submitted with our SUP package shows all proposed grades along with existing and proposed contours and spot elevations.
8. Can the disturbed area be seen from off-site? If yes, from which directions, and which properties or roadways?

Yes. The disturbed area can be seen from all directions depending on proximity to the site. Most notably, the disturbed area will be visible from across the Truckee River in Storey County.

9. Could neighboring properties also be served by the proposed access/grading requested (i.e. if you are creating a driveway, would it be used for access to additional neighboring properties)?

The proposed access road from Mustang Road will essentially provide access to the property it crosses, which is owned by the Bureau of Land Management (BLM). It also has the potential to serve other properties to the west/northwest of the subject property in the future, one of which is owned by Washoe County.

10. What is the slope (Horizontal:Vertical) of the cut and fill areas proposed to be? What methods will be used to prevent erosion until the revegetation is established?

Based on Article 438 of the Washoe County Development Code, Grading Standards, the proposed cut/fill slopes will be a maximum of 3:1.

At this time it is proposed that once the grading activities have been completed that all disturbed 3:1 slope be treated with 6-12” rock rip rap for erosion protection.

11. Are you planning any berms?

☐ Yes  ☐ No  If yes, how tall is the berm at its highest?
12. If your property slopes and you are leveling a pad for a building, are retaining walls going to be required? If so, how high will the walls be and what is their construction (i.e. rockery, concrete, timber, manufactured block)?

At this time we will only require one section of our property to have one retaining wall. Since we will not be able to catch grade with a 3:1 slope before our property line we will need a 500 foot long wall. The highest point will be 6' and averages 4' tall. The wall be be constructed as a rockery wall.

13. What are you proposing for visual mitigation of the work?

To the north of our site we have the main UP railroad. The railroad is approximately 27' higher than our finished floor elevation. This essentially puts our site in hole from the north. Our south property is bound by the Truckee River.

14. Will the grading proposed require removal of any trees? If so, what species, how many and of what size?

No. There are no trees of note that are proposed to be removed.
15. What type of revegetation seed mix are you planning to use and how many pounds per acre do you intend to broadcast? Will you use mulch and, if so, what type?

A native grass and shrub mix per site specific seed mix by Comstock Seed Company will be broadcast at the approx. rate of 20lbs/ac and lightly chain dragged. A tackifier will be applied at 200 lbs/ac and the area will be hydromulched with Ecoaegis Bonded Fiber Matrix at the rate of 2000 lbs/ac.

16. How are you providing temporary irrigation to the disturbed area?

The revegetated areas will be reseeded after Oct. 1 to germinate per natural precipitation. If construction schedule does not allow for this and it must be seeded during the growing season; temporary timer controlled above gradestaked impact spray heads will be utilized for germination.

17. Have you reviewed the revegetation plan with the Washoe Storey Conservation District? If yes, have you incorporated their suggestions?

No, we are deferring to the expertise of Comstock Seed's local expertise.

18. Are there any restrictive covenants, recorded conditions, or deed restrictions (CC&Rs) that may prohibit the requested grading?

☐ Yes  ☐ No  If yes, please attach a copy.

Commitment

Thank You for your confidence and support. We at First American Title Insurance Company maintain the fundamental principle:

Customer First!

First American Title Insurance Company
First American Title Company of Nevada

INFORMATION

The Title Insurance Commitment is a legal contract between you and the company. It is issued to show the basis on which we will issue a Title Insurance Policy to you. The Policy will insure you against certain risks to the land title, subject to the limitations shown in the policy.

The Company will give you a sample of the Policy form, if you ask.

The Commitment is based on the land title as of the Commitment Date. Any changes in the land title or the transaction may affect the Commitment and the Policy.

The Commitment is subject to its Requirements, Exceptions and Conditions.

This Information is not part of the title insurance commitment.

YOU SHOULD READ THE COMMITMENT VERY CAREFULLY. If you have any questions about the Commitment, please contact the issuing office.

First American Title Insurance Company
COMMITMENT FOR TITLE INSURANCE

Issued by

First American Title Company of Nevada

Agreement to Issue Policy

We agree to issue a policy to you according to the terms of this Commitment.

When we show the policy amount and your name as the proposed insured in Schedule A, this Commitment becomes effective as of the Commitment Date shown in Schedule A.

If the Requirements shown in this Commitment have not been met within six months after the Commitment Date, our obligation under this Commitment will end. Also, our obligation under this Commitment will end when the Policy is issued and then our obligation to you will be under the Policy.

Our obligation under this Commitment is limited by the following:

The Provisions in Schedule A.

The Requirements in Schedule B-1.

The Exceptions in Schedule B-2.

The Conditions.

This Commitment is not valid without Schedule A and Sections 1 and 2 of Schedule B.

NOTE: THE ABOVE METES AND BOUNDS LEGAL DESCRIPTION APPEARED PREVIOUSLY IN THAT CERTAIN DOCUMENT RECORDED FEBRUARY 29, 2008, AS INSTRUMENT NO. 3626075, OFFICIAL RECORDS.
SCHEDULE B

SECTION ONE

REQUIREMENTS

The following requirements must be met:

(A) Pay the agreed amounts for the interest in the land and/or the mortgage to be insured.

(B) Pay us the premiums, fees and charges for the policy.

(C) Documents satisfactory to us creating the interest in the land and/or the mortgage to be insured must be signed, delivered and recorded.

(D) You must tell us in writing the name of anyone not referred to in this Commitment who will get an interest in the land or who will make a loan on the land. We may then make additional requirements or exceptions.

(E) Releases(s) or Reconveyance(s) of Item(s): 24

(F) Other:

(G) You must give us the following information:
   1. Any off record leases, surveys, etc.
   2. Statement(s) of Identity, all parties.
   3. Other:
      • Proper showing as to the type of entity and the location of the formation of Scannell Properties. Additional requirements may be necessary upon being supplied with same.

The following additional requirements, as indicated by "X", must be met:

[X] (H) Provide information regarding any off-record matters, which may include, but are not limited to: leases, recent works of improvement, or commitment statements in effect under the Environmental Responsibility Acceptance Act, Civil Code Section 850, et seq.

The Company's Owner's Affidavit form (attached hereto) must be completed and submitted prior to close in order to satisfy this requirement. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.
[X] (I) An ALTA/ACSM survey of recent date, which complies with the current minimum standard detail requirements for ALTA/ACSM land title surveys, must be submitted to the Company for review. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.

[X] (J) The following LLC documentation is required from Hiatt Land & Development Company, Ltd., a Nevada limited liability company:

- Prior to the close of escrow or the issuance of any policy of title insurance, we will require that copies of the Articles of Organization, the Operation Agreement and the Current Appointment of Manager of Hiatt Land & Development Company, Ltd., a Nevada Limited Liability Company, be submitted to the Company for examination.

- Evidence of proper filing and good standing in the State of Nevada of Hiatt Land & Development Company, Ltd.

[] (K) The following partnership documentation is required from:

[] (L) The following documentation is required from corporation:

[] (M) Based upon the Company's review of that certain partnership/operating agreement dated for the proposed insured herein, the following requirements must be met:

Any further amendments to said agreement must be submitted to the Company, together with an affidavit from one of the general partners or members stating that it is a true copy, that said partnership or limited liability company is in full force and effect, and that there have been no further amendments to the agreement. This Commitment will then be subject to such further requirements as may be deemed necessary.

[] (N) A copy of the complete lease, as referenced in Schedule A, #3 herein, together with any amendments and/or assignments thereto, must be submitted to the Company for review, along with an affidavit executed by the present lessee stating that it is a true copy, that the lease is in full force and effect, and that there have been no further amendments to the lease. This Commitment will then be subject to such further requirements as may be deemed necessary.

[X] (O) Approval from the Company's Underwriting Department must be obtained for issuance of the policy contemplated herein and any endorsements requested thereunder. This Commitment will then be subject to such further requirements as may be required to obtain such approval.

First American Title Insurance Company
[X] (P) Potential additional requirements, if ALTA Extended coverage is contemplated hereunder, and work on the land has commenced prior to close, some or all of the following requirements, and any other requirements which may be deemed necessary, may need to be met:

[] (Q) The Company's "Mechanic's Lien Risk Addendum" form must be completed by a Company employee, based upon information furnished by the appropriate parties involved.

[] (R) The Company's "Indemnity Agreement I" must be executed by the appropriate parties.

[] (S) Financial statements from the appropriate parties must be submitted to the Company for review.

[] (T) A copy of the construction contract must be submitted to the Company for review.

[] (U) An inspection of the land must be performed by the Company for verification of the phase of construction.

First American Title Insurance Company
SCHEDULE B

SECTION TWO

EXCEPTIONS

Schedule B of the policy or policies to be issued will contain exceptions to the following matters unless the same are disposed of to the satisfaction of the Company:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records. Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.

2. Any facts, rights, interests, or claims that are not shown by the public records but that could be ascertained by an inspection of the land or that may be asserted by persons in possession thereof.

3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.

4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. Unpatented mining claims, (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof, (c) water rights or, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.

6. Any lien or right to a lien for services, labor or material not shown by the public records.

Exceptions 1-6 will be omitted on extended coverage policies

7. Water rights, claims or title to water, whether or not shown by the public records.

8. Any taxes that may be due, but not assessed, for new construction which can be assessed on the unsecured property rolls, in the Office of the Washoe County Assessor, per Nevada Revised Statute 361.260.

9. Any unpaid charges due the Washoe County Sewer & Water District. Specific amounts may be obtained by calling the Washoe County Water Resources, Utility Services Division at P.O. Box 11130, Reno, NV 89520, (775)954-4601.

First American Title Insurance Company
10. Those taxes for the fiscal year July 1, 2014 through June 30, 2015, including any secured personal property taxes collected by the County Treasurer.

First American Title Insurance Company
25. Easements, dedications, reservations, provisions, relinquishments, recitals, certificates, and any other matters as provided for or delineated on Survey Map #5012. Reference is hereby made to said plat for particulars.

NOTE: Said Map purportedly depicts a 30' wide access easement as granted per BLM-Nevada Serial No. 77824.

27. Any adverse claim based upon the assertion that:

(A) Any portion of the land lies below the last natural high water mark of the Truckee River.

(B) Some portion of the land has been created by artificial means or has accreted to such portion so created.

(C) Some portion of the land has been brough within the boundaries thereof by an avulsive movement of the Truckee River or has been formed by accretion of any such portion.

(D) Any rights of access to the Truckee River for recreational purposes which may exist over the land.

28. The existence of any reversionary interest, possibility of reverter, power of termination, right of first refusal, or similar interest, of the United States of America, or any other person or entity in that portion of the land lying within the right of way granted to the Southern Pacific Railroad by the United States Government.

29. Any facts, rights, interests or claims which would be disclosed by a correct ALTA/ACSM Survey.

30. Rights of parties in possession of the land by reason of unrecorded leases and all parties claiming by, through or under said lessees or tenants, if any, that would be disclosed from an inquiry of the parties, or by an inspection of the land.

**INFORMATIONAL NOTES**

The map attached, if any, may or may not be a survey of the land depicted hereon. First American expressly disclaims any liability for loss or damage which may result from reliance on this map except to
the extent coverage for such loss or damage is expressly provided by the terms and provisions of the title insurance policy, if any, to which this map is attached.
CONDITIONS

1. DEFINITIONS
   (a) "Mortgage" means mortgage, deed of trust or other security instrument.
   (b) "Public Records" means title records that give constructive notice of matters affecting the title
       according to the state law where the land is located.

2. LATER DEFECTS
   The Exceptions in Schedule B - Section Two may be amended to show any defects, liens or
   encumbrances that appear for the first time in the public records or are created or attached between the
   Commitment Date and the date on which all of the Requirements (a) and (c) of Schedule B - Section One
   are met. We shall have no liability to you because of this amendment.

3. EXISTING DEFECTS
   If any defects, liens or encumbrances existing at Commitment Date are not shown in Schedule B, we may
   amend Schedule B to show them. If we do amend Schedule B to show these defects, liens or
   encumbrances, we shall be liable to you according to Paragraph 4 below unless you knew of this
   information and did not tell us about it in writing.

4. LIMITATION OF OUR LIABILITY
   Our only obligation is to issue to you the Policy referred to in this Commitment, when you have met its
   Requirements. If we have any liability to you for any loss you incur because of an error in this
   Commitment, our liability will be limited to your actual loss caused by your relying on this Commitment
   when you acted in good faith to:

   comply with the Requirements shown in Schedule B - Section One
   or
   eliminate with our written consent any Exceptions shown in Schedule B - Section Two.

   We shall not be liable for more than the Policy Amount shown in Schedule A of this Commitment and our
   liability is subject to the terms of the Policy form to be issued to you.

5. CLAIMS MUST BE BASED ON THIS COMMITMENT
   Any claim, whether or not based on negligence, which you may have against us concerning the title to
   the land must be based on this commitment and is subject to its terms.

First American Title Insurance Company

EXHIBIT D
Privacy Policy

We Are Committed to Safeguarding Customer Information
In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information - particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our parent company, The First American Corporation, we have adopted this Privacy Policy to govern the use and handling of your personal information.

Applicability
This Privacy Policy governs our use of the information which you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its Fair Information Values, a copy of which can be found on our website at www.firstam.com.

Types of Information
Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

Use of Information
We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies, and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies, or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.

Former Customers
Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

Confidentiality and Security
We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's Fair Information Values. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

INTRODUCTION

LOCATION OF PROPERTY

The Mustang Industrial Development is a proposed development located on a vacant parcel of land off the Mustang Road Exist east of Sparks on Interstate 80. The parcel is bound by the UP Railroad to the north and the Truckee River to the south. Please see attached site plan for location. The site is approximately 117.76 acres with an APN of 084-370-02. The project is located in portions of Section 15 & 16, Township 19 North, Range 21 East, Mount Diablo Meridian in Washoe County, Nevada. See Exhibit 1 for a general Vicinity Map.

DESCRIPTION OF PROPERTY

The site is presently undeveloped land with the slope falling from the north side of the site to the river along the south side of the property. The undisturbed area of the site is sparsely populated with small weeds and sagebrush up to 2 feet in height.

PROJECT DESCRIPTION

Scannell Properties is proposing to develop a 117-acre parcel in the Truckee Canyon area of Washoe County, Nevada, near the intersection of Interstate 80 and Mustang Road. The site is bound by the Truckee River to the south and the Union Pacific Railroad to the north. The current zoning, Industrial, allows for the proposed use which includes two light industrial buildings that will be approximately 344,000 square feet and 517,000 square feet. Site development will be supported by infrastructure improvements including the construction of a new road from Mustang Road, a water main extension from the north, on-site sewer collection and treatment, and stormwater ponds to collect runoff. The project is expected to begin late-summer of 2015.

DRAINAGE BASIN DESCRIPTION

DRAINAGE DESCRIPTION

The entire site is being planned for development, as per Exhibit 2 attached, our site has been divided into five separate detention basin areas. All site drainage will be routed to each of these basins, each basin has been designed to meet the Washoe County LID standards for water quality and will treat the runoff before being allowed to be discharged back into the natural drainage way.

FLOODPLAIN INFORMATION

The project site lies in both Flood Zone AE and X. This information is based on the FEMA Flood Insurance Rate Map No. 32031C3069G and 32031C3088G, dated March 16, 2009 for Washoe County, Nevada. Flood Zone AE is defined as base floodplain where base flood elevations are provided. Flood Zone X is defined as “Areas determined to be outside the 500 year flood plain”. Please see Exhibit 4 for the FEMA Map.
PROPOSED DRAINAGE FACILITIES

COMPLIANCE WITH REGULATIONS AND ADOPTED PLANS

The design criteria which has been used for this drainage report is in compliance with the Washoe County design guidelines, Article 438 Grading Standards.

HYDROLOGIC CRITERIA

The following design criteria assumptions were used for this analysis:

- Design for on-site facilities is based upon the 100 year storm event.
- Rainfall intensity/duration frequencies were obtained from the Washoe County, NV NOAA Atlas 14 Point Precipitation Frequency (Please see Appendix A)
- Runoff coefficients were obtained from Table 7-7 of the Rational Method QTR-55 Software Program distributed by Hasted Methods.

METHODOLOGY

The rational method was used to determine the peak flows. The parameters for this method are:

1. The drainage area (A, acres)
2. Time of Concentration (Tc, minutes)
3. Runoff Coefficient (C)
4. Rainfall Intensity (i, inches per hour)

The time of concentration is calculated based on the equation:

\[ T_c = \frac{10 \text{ min or } L}{(V \times 60)}, \text{ whichever is greater,} \]

where

\[ L = \text{The travel distance in feet} \]
\[ V = \text{Channel or overland velocity in feet per second} \]

Due to the relatively small size of the site and sub areas and the high runoff potential within commercial developments, the minimum \( T_c \) of 10 minutes was used in this analysis.

Rainfall intensity/duration frequencies were obtained from the NOAA Atlas 14 Point Precipitation Frequency IDF Curve. For \( T_c = 10 \text{ min,} \) the rainfall intensities are \( i_{25} = 2.39 \text{ in/hr} \) and \( i_{100} = 3.57 \text{ in/hr}. \)

From the Public Works Design Manual (See Appendix A), the following runoff coefficients were used:

- Developed \( C = 0.90 \)
- Undeveloped \( C = 0.45 \)

The peak runoff is calculated using the following equation: \( Q = C_i A \)
FACILITY DESIGN CALCULATIONS

ON-SITE DRAINAGE CALCULATIONS

Our proposed project will have an on-site storm drainage system consisting of four separate detention pond areas. These areas will have multiple sub basins within each basin but for summary purposes they will be lumped together. Table’s 1 and 2 show the net increase in flow due to the development and the detention/retention basin required sizing. All calculations can be found in Appendix B, C and D.

CONCLUSION

All designed storm drain and flood control facilities are effective in controlling storm runoff and have no impact on existing off-site facilities. Therefore, no mitigation of impacts is required. In addition, the storm drain and flood control facilities are in compliance with the following:

- FEMA requirements - No buildings are proposed within the existing or proposed 100-year flood plain boundaries.
- Drainage Laws – As designed, the drainage system shall promote and preserve the general health, welfare, and economic being of the region.
• The designed facilities are consistent with and integrated with the Washoe County Drainage Master Plan.

• All storm drain and flood control improvements have been designed to meet or exceed the design standards as set forth in the overall Washoe County Master Drainage Plan and in compliance with the Washoe County design guidelines, Article 438 Grading Standards.

</table>

1 Precipitation frequency (PF) estimates are based on frequency analysis of partial duration series (PDS). Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.
